Continuation of 5. does NOT place the application in condition for allowance because: The instant claims are obvious over Maa et al (6,284,282). Maa discloses the limitations of the instant claims. Specifically Maa discloses that fine particle fraction (FPF) for the powders is prefered to be at least 10 % (which includes 50 % and 75 %) and states that the higher the fraction the better. Also the powders have an aerodynamic mass median diameter of at least 6.8 micrometer (col. 5, lines 56-67). Although Maa does not specifically disclose that 50 % of the mass of particles stored in the receptacle is delivered to the pulmonary system of the subject, it does disclose that the powders have at least about 70 % active protein, with at least about 90 % protein being most prefered. It would be obviuos to one of ordinary skill in the art to optimize the amount of active drug delivered to the site. Other limitations of the claims are also met by Maa et al as stated in the previous Office Action. Note; the terminal disclaimer filed 09/29/03 is entered..
